Getting Connected

IrriGreen Wi-Fi Network & App Startup Steps

1. Download IrriGreen EcoZone app with blue logo:
2. Go to your device *Settings*
3. Go to *Wi-Fi Settings*
4. Find IrriGreen network
5. Log onto IrriGreen network; Password is: **GeniusXXXX**

Upper case “G”

XXXX are the last 4 digits on the controller label

5. Start IrriGreen EcoZone app
6. Add Customer
- 7. Select Customer**
8. Dashboard screen appears

Log-in Hints

- A. Make sure in Wi-Fi range of Controller
- B. Password entered correctly (Check for upper case G)
- C. Device sees network but doesn't connect; device settings may prevent it logging onto Wi-Fi networks without Internet access (e.g. “Wi-Fi optimization”)
- D. Is another device already logged onto the network
(Only one device can be connected to the IrriGreen network at a time.)

Log on IrriGreen® Wi-Fi Network: Steps 1-3

1. Go to your mobile device *Settings*
2. Go to *Wi-Fi Settings*
3. Find IrriGreen network

Android

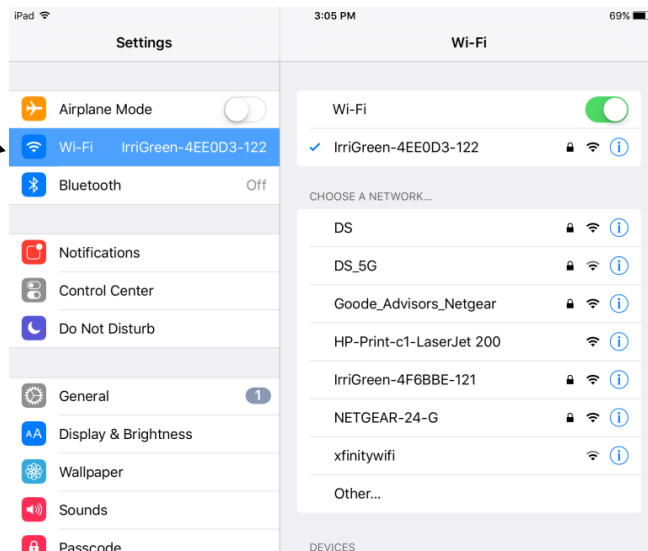

iOS

IrriGreen
Wi-Fi
network
address

Note:
No need to log
onto property
owner's Wi-Fi
network

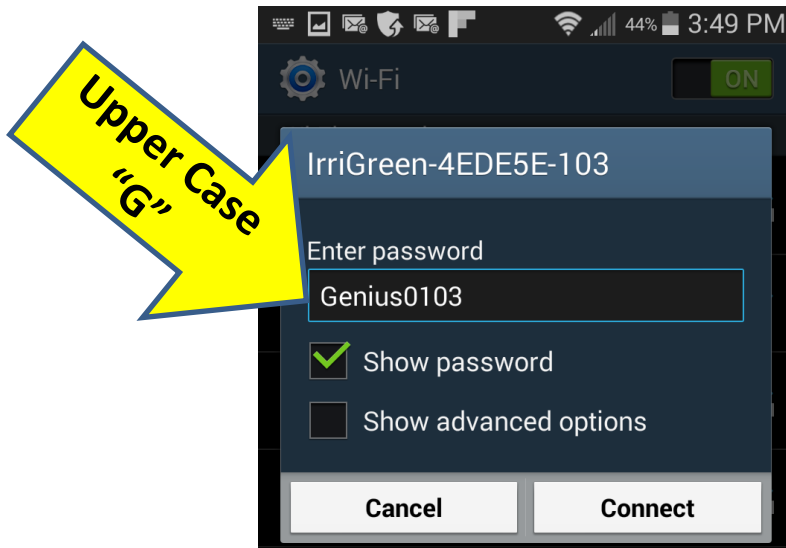

Wi-Fi Range:

Controller location, height, landscape elevations (signal going through dirt), house construction (stucco, etc.) will affect Wi-Fi range. Use Wi-Fi extender such as Linksys AC750 to extend range while mapping zones.

Log on IrriGreen® Wi-Fi Network: Step 4

4. Enter Password: GeniusXXXX

XXXX = Last Four Digits of Manufacturing Code on Controller Label

Log-in Hints

- A. Make sure in Wi-Fi range of Controller
- B. Password entered correctly (*Check for upper case "G"*)
- C. Device sees network but doesn't connect. Device settings may be preventing it from logging onto Wi-Fi networks without Internet access (*sometimes called "Wi-Fi optimization", look in Network Settings*)
- D. Is another device already logged onto the network
(*Only one device can be connected to the IrriGreen network at a time, check to see if any other device is already connected.*)

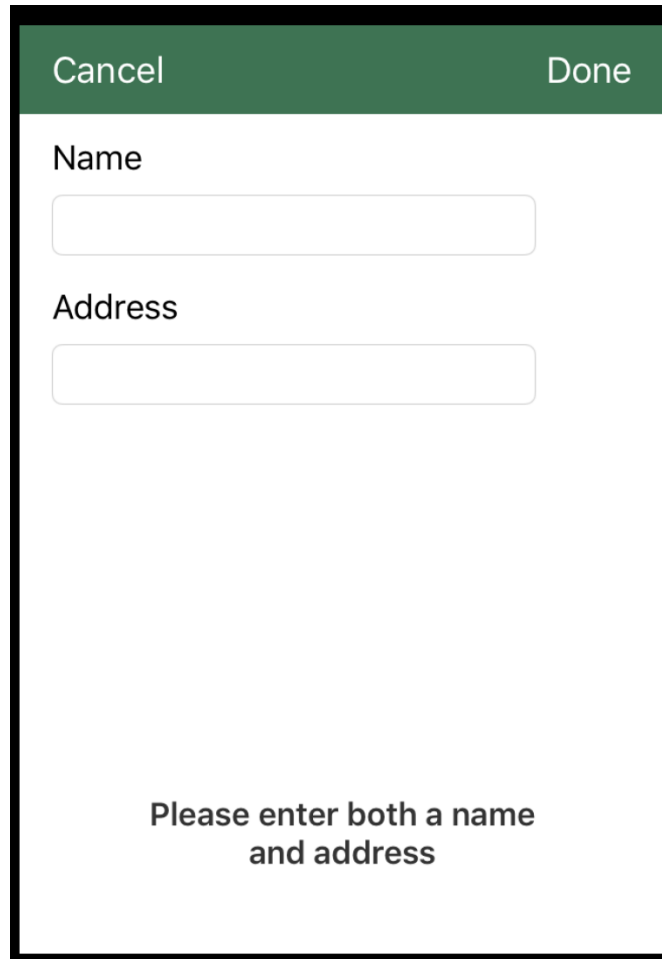

Start App: Steps 5-7

5. Tap on
IrriGreen
EcoZone App
(blue logo)

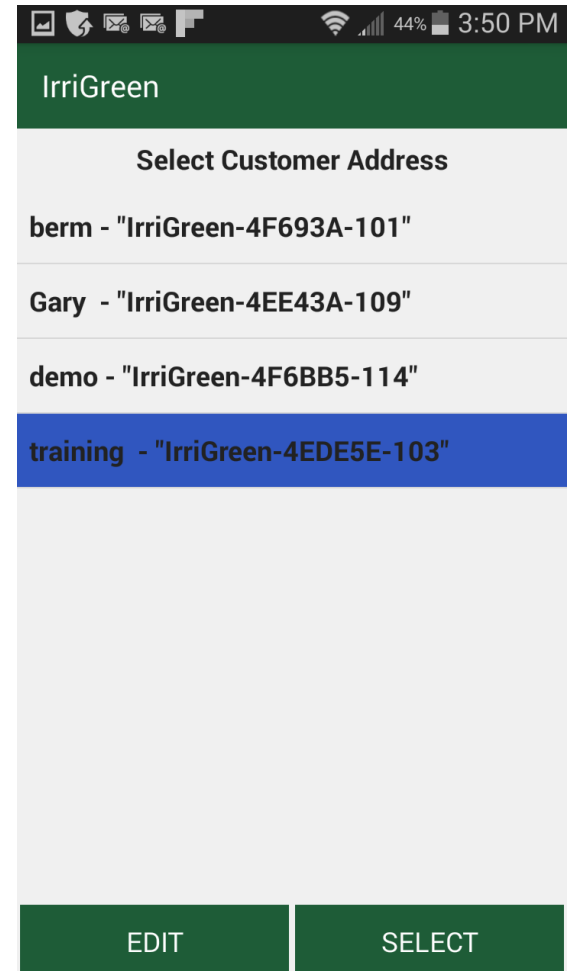

NOTE:
iOS security
requires logging
into network
before starting app

6. Add Customer

A screenshot of the 'Add Customer' screen in the IrriGreen app. The screen has a dark green header with 'Cancel' on the left and 'Done' on the right. Below the header, there are two text input fields: 'Name' and 'Address'. At the bottom, there is a message: 'Please enter both a name and address'.

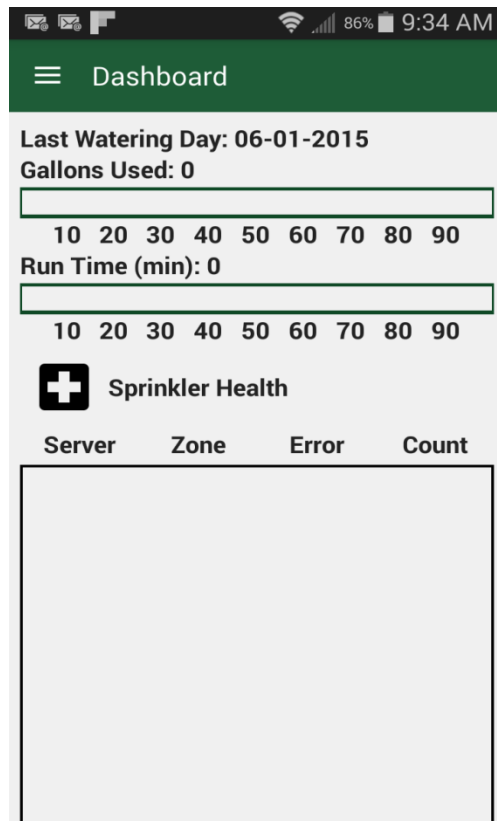

7. Highlight Customer
and click **Select**

A screenshot of the 'Select Customer Address' screen in the IrriGreen app. The screen has a dark green header with 'IrriGreen' on the left. Below the header, there is a title 'Select Customer Address'. There are four list items, each with a name and an ID: 'berm - "IrriGreen-4F693A-101"', 'Gary - "IrriGreen-4EE43A-109"', 'demo - "IrriGreen-4F6BB5-114"', and 'training - "IrriGreen-4EDE5E-103"'. The 'training' item is highlighted with a blue background. At the bottom, there are two buttons: 'EDIT' and 'SELECT'.

Dashboard Appears: Step 8

Last Watering Day, Gallons, Run Time & System Status
App Navigation Menu

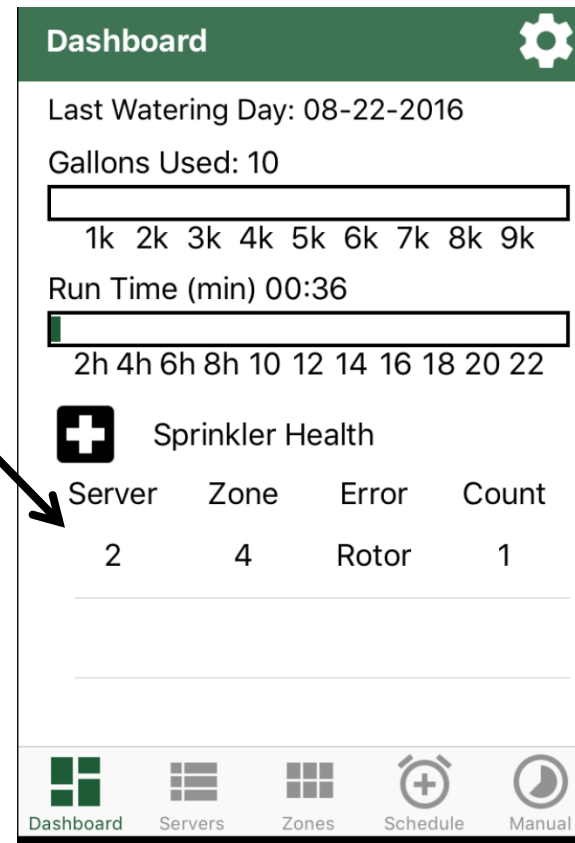

Android

NOTE:
If notice appears,
touch & hold to
clear.

If it re-appears,
zone may not be
running properly,
contact your
installer.

Android

Upper left icon opens menu

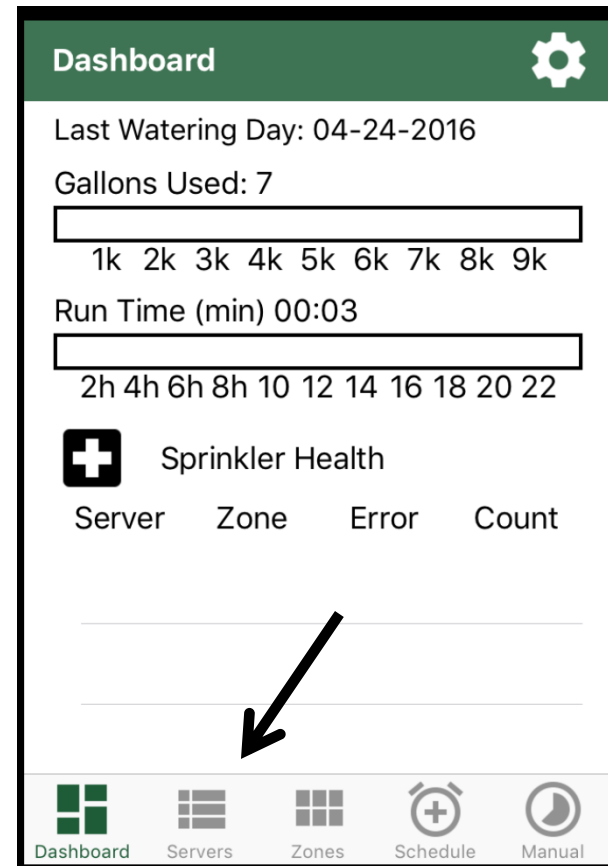

NOTE:
IrriGreen
system clock is
set to the
mobile device
time whenever
the app opens
the **Dashboard**

*The three AA
batteries in the
Controller are
for system clock
backup.
Replace yearly.*

iOS

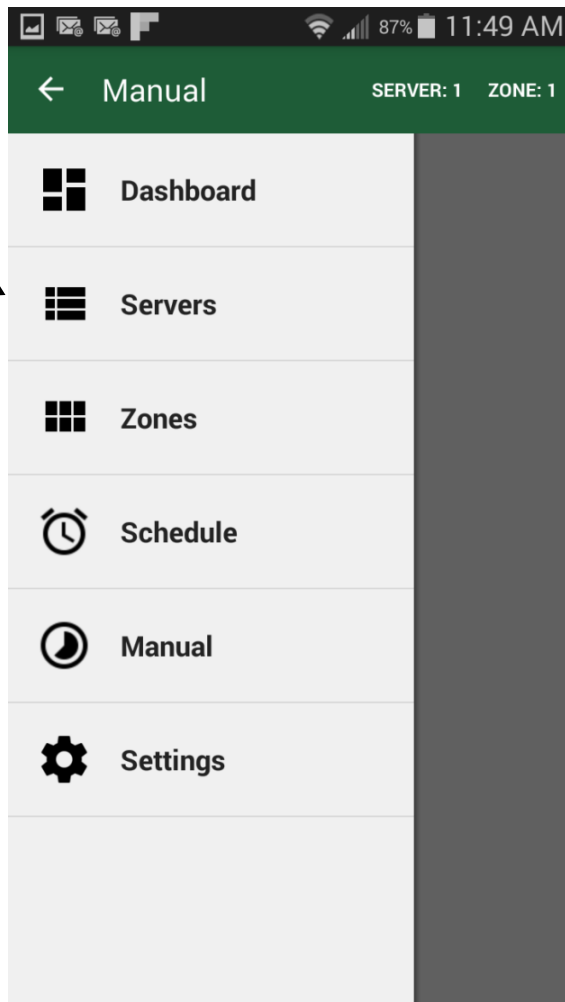

Bottom menu

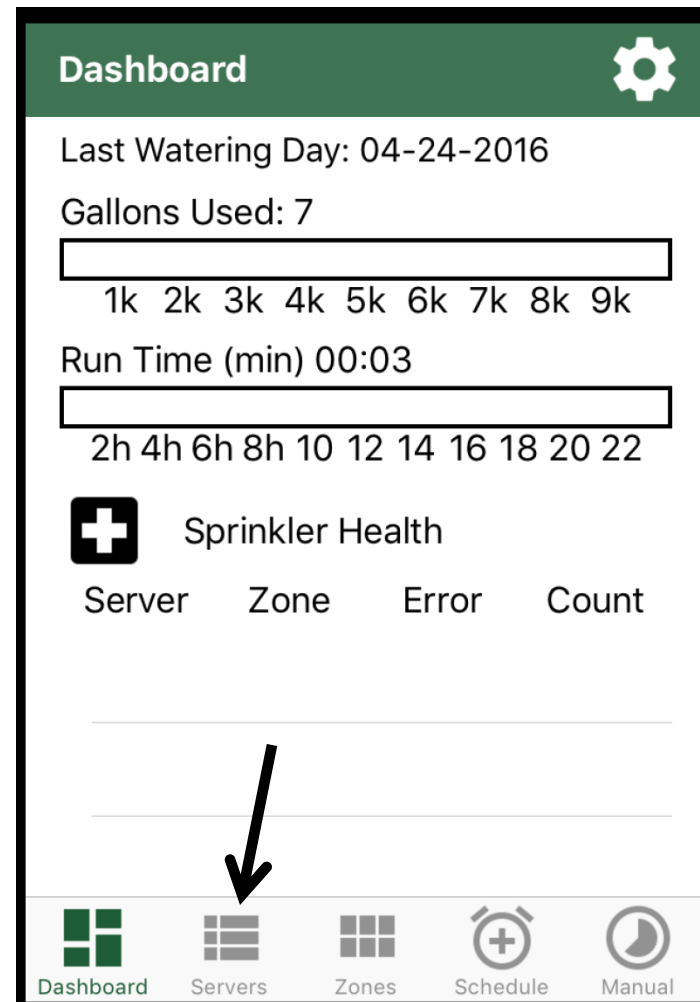

System Settings: Step 1

Go to Servers Page

Android

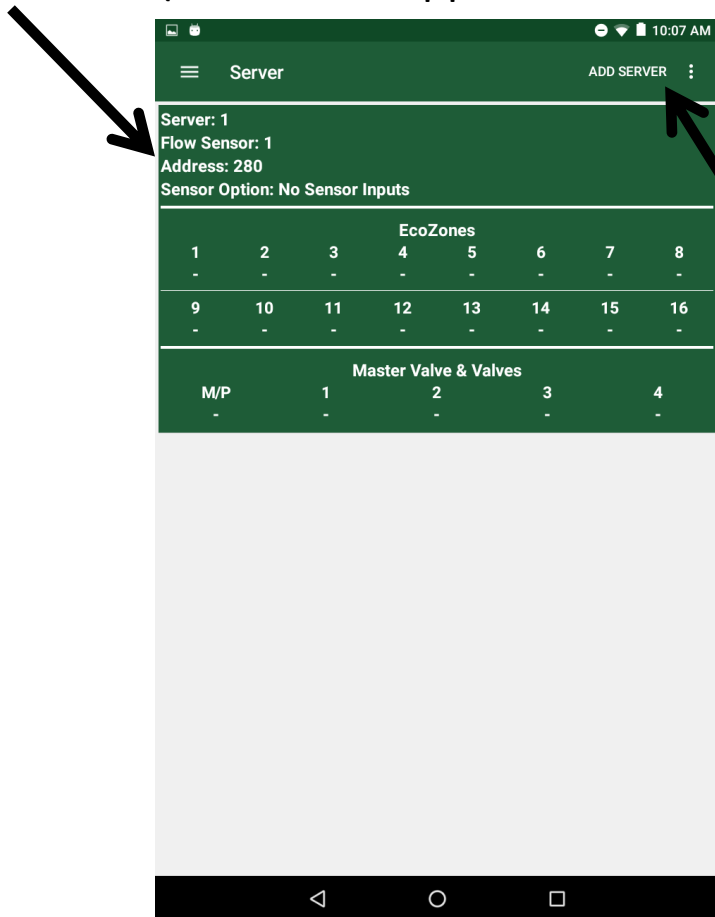

iOS

System Settings: Step 2

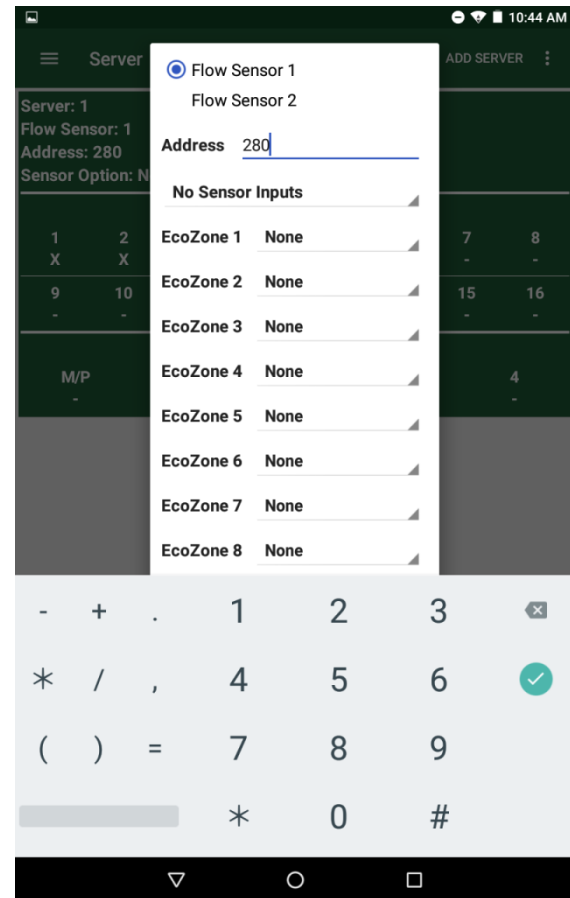

A. Click & hold green Server section of screen
(Address 74 appears as default)

NOTE:
For systems with more than 16 EcoZones:

Click **ADD SERVER** to add another server after first Server Address is entered

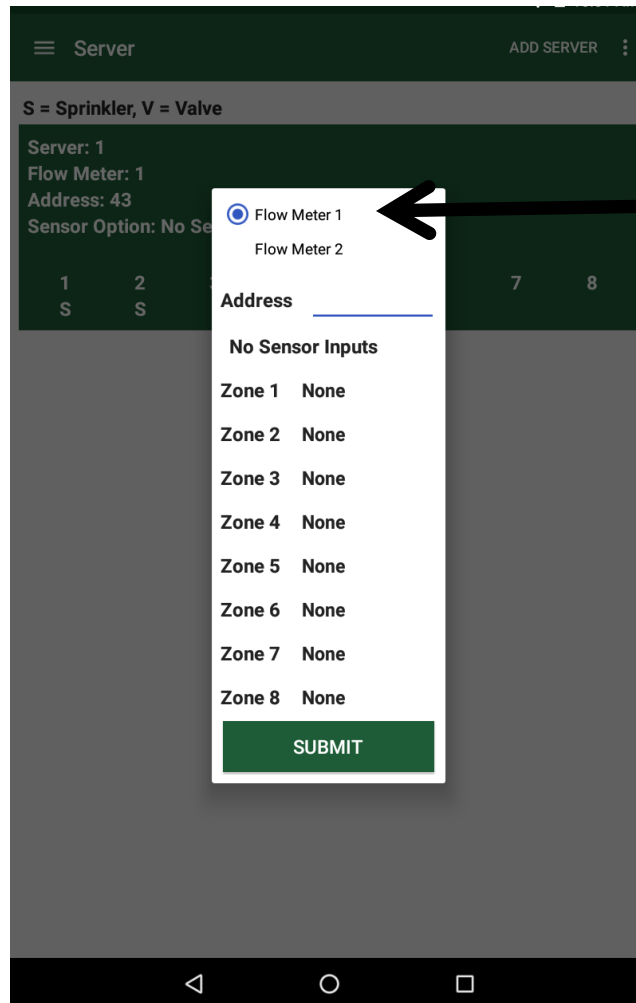

B. Add / Edit Server popup menu will appear

System Settings: Step 3

Select **Flow Meter 1** if red Flow Sensor lead wired to “Sensor 1”

Select **Flow Meter 2** if red Flow Sensor lead wired to “Sensor 2”

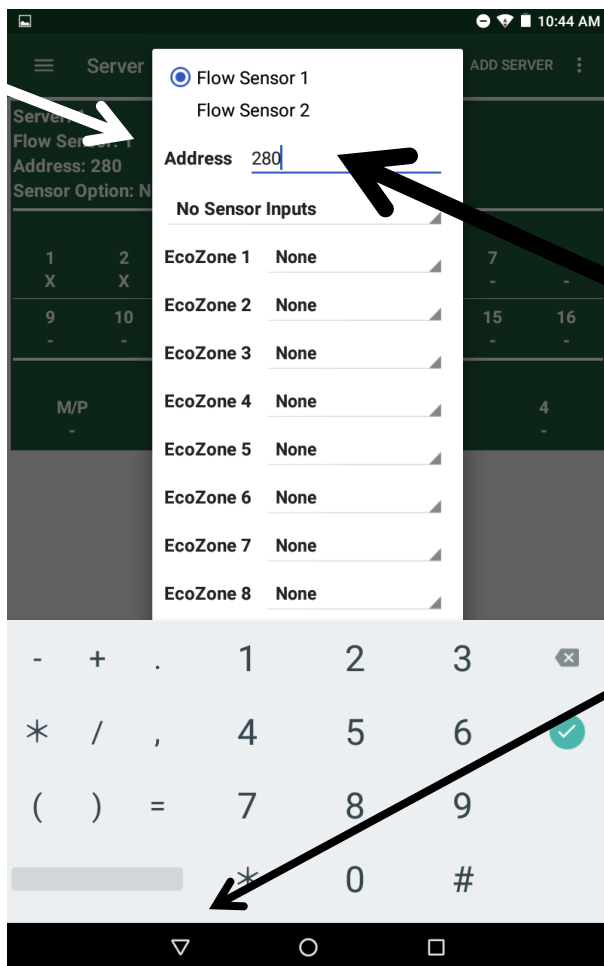

System Settings: Step 4

Enter Server Address

A. Click Address

B. Keypad appears

C. Enter Server Address: last four digits of Manufacturing Code on the Server label

Back button
removes
keypad
(Android)

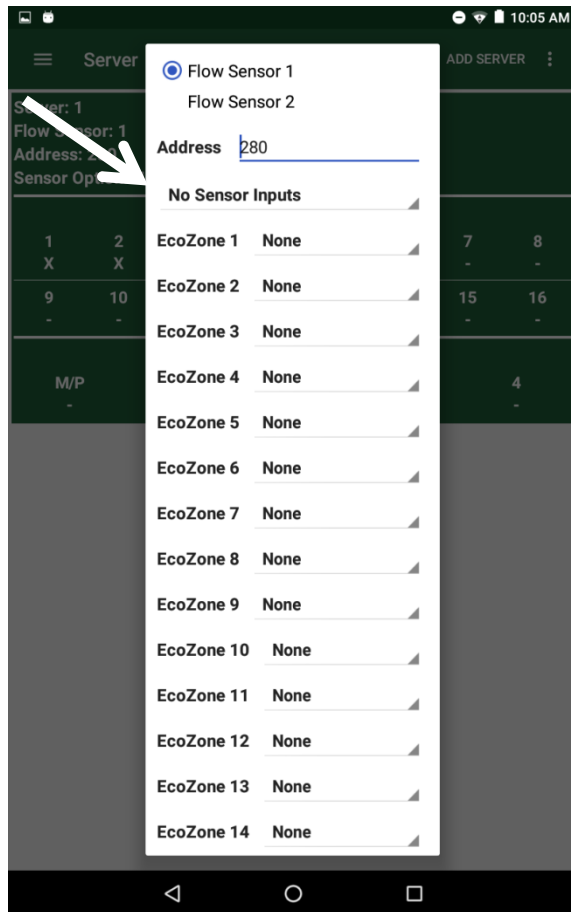

NOTE: Only the last three digits may appear in the address box

System Settings: Step 5

Select Sensor Inputs for any Rain or Soil Moisture Sensors (SMS) that are wired to the Server

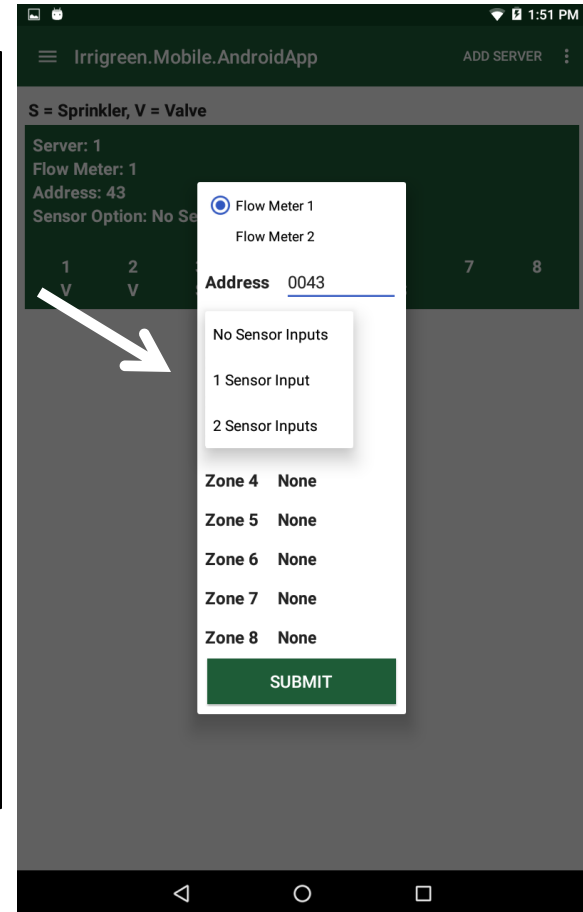

- A. Click No Sensor Inputs (default)
- B. Sensor Input Menu appears
- C. Select “No”, “1”, or “2” Sensor inputs

- No Sensor Inputs** (Default)
- 1 Sensor** (Rain sensor or SMS)
- 2 Sensor** (Rain and Soil Moisture)

NOTE:
For 16+ zone systems with multiple servers and sensor(s):

Wire separate sensors to each server, then select Sensor Inputs for each server

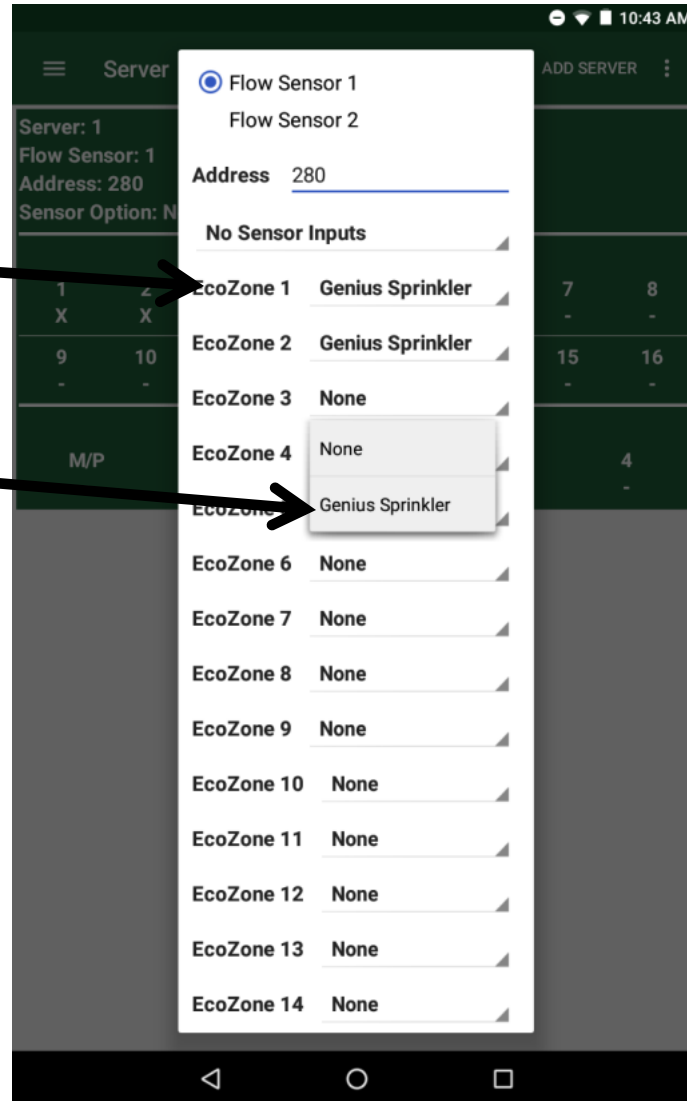

Enable EcoZones Needed for the Installation

A. Go to Server Page

B. Click EcoZone #

C. Select “Genius Sprinkler” for all EcoZones needed

There are 16 EcoZones available, as two separate sequences of eight.

You may divide the zones up between the two separate sequences of eight.

Example:

Seven EcoZones could be:

EcoZones 1-7

OR

EcoZones 1-4 and EcoZones 9-11

Sprinklers are Pre-numbered for each Zone

Sprinklers will run in that pre-numbered order*

Locate each sprinkler in the order you want them to run*

*Head #1 runs first
Head #2 runs second
Head #3 runs third
Etc.

EcoZone Sprinklers have Zone Numbers
1-8, 9-16 assigned at the factory

Zone Number on Sprinkler box

Zone Number on Sprinkler

Eight Sprinklers per Server Cable

Splice Free Connections with Sprinkler Cables

Sprinklers will run in the order of their Zone Numbers

EcoZones 1-8:

Wire Server Cable to “Eco 1-8” and “EcoZone Common”

Locate Sprinklers numbered 1-8 in the order you want them to run on the landscape

EcoZones 9-16:

Wire second Server Cable to “Eco 9-16” and “EcoZone Common”

Locate Sprinklers numbered 9-16 in the order you want them to run on the landscape (after 1-8)

DO Install Cables in a trench or pull a parallel run of 1 inch pipe as conduit for Cables

DON'T pull EcoZone Cables

DO loop excess Cable inside a valve box adjacent to the head, buried below turf

DON'T cut and splice EcoZone Cables

DO branch out your Cables in different directions with Tees

Use a 6FT Plug-n-Play Cable Tee; remove End Plug and use to plug the last Sprinkler in the new

DO add a second Server Cable if branching off immediately from the Server

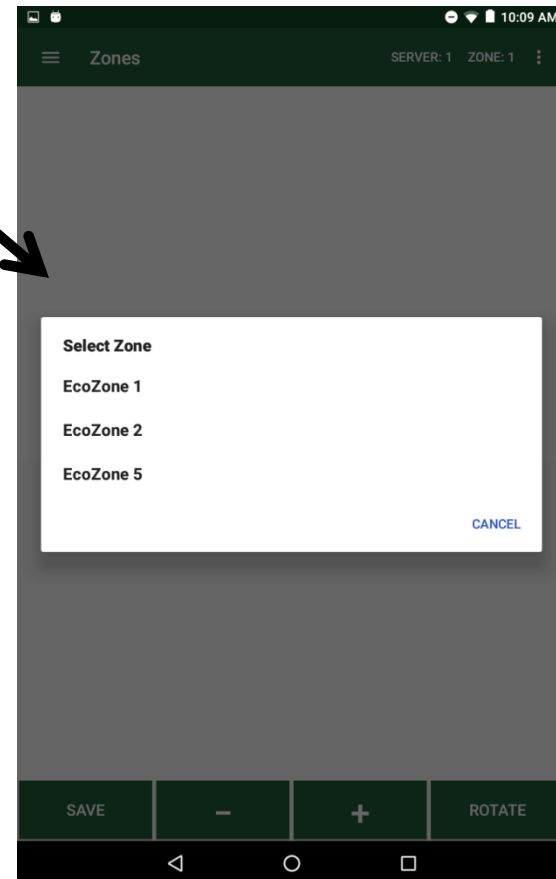

DO protect all EcoZone connections with small valve boxes, buried below turf

Calibrate & Map Genius® Zones: Steps 1-2

1. Select Zones

2. Select Zone to Map Only EcoZones Appear*

***NOTE:**
Valve zones
will appear
on the
Schedule
Page

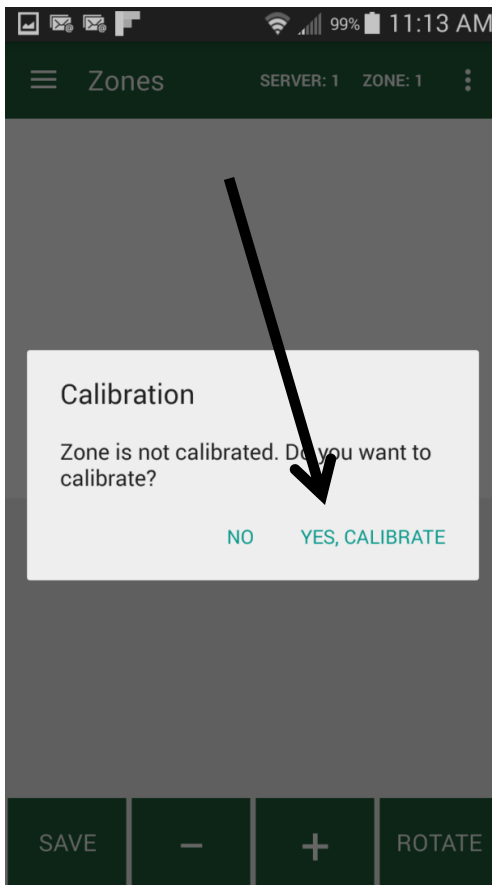

Calibrate & Map EcoZones: Steps 3-4

Calibrate Each EcoZone Before Mapping

3. Yes, Calibrate

Takes about 4 minutes

Head pops up three times

NOTE:

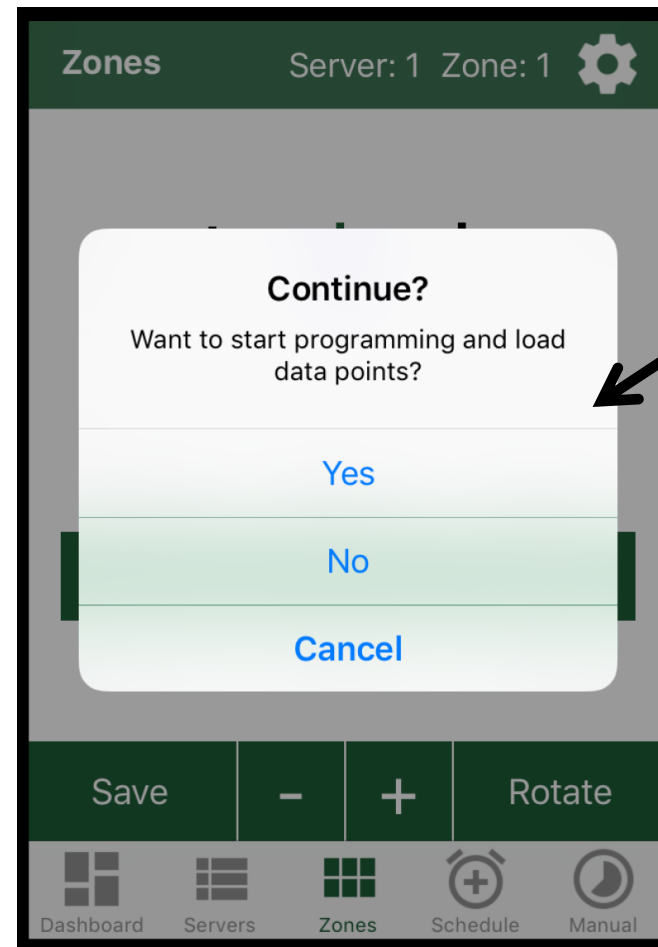

If zone has been calibrated, select "NO"

Hint:

Sprinkler not tracking zone properly? Check for debris in filter; if clean, then recalibrate the zone. If you recalibrate, may need to re-map.

4. Start Programming?

Yes

Calibrate & Map EcoZones: Steps 5-7

Program/Map Sprinkler to Zone Shape

5. Click/Hold “Rotate” to turn streams

437 Rotation positions (every 0.8 degrees)
Clockwise Direction

6. Click “- / + (Minus/Plus)” to Set Distance

Distance (~6” increments)
Distances are approximate

7. Click “Insert” to create position.

System draws a straight line between any
two points (try not to “crowd” points)

Best practice is to **use minimal number of points to create zone shape** and add points as needed to optimize tracking
Up to 50 points per zone

Note:
When zone is first started up, it will spray at Rotation “0” and 15 feet.
It will turn only when you tap/hold “Rotate”.

The zone startup (Position 1) may be set to any Rotation (0-437), but Position 1 distance must be 10+ feet to fully pop up and seat the riser.

Zone Map & Position Table

System draws straight line between inserted Positions

Positions/points appear on Zone Map

- System connects last point saved to the first point
- To follow curves, insert points close together
- Head will drop and rotate to next **Position** if two **Positions** are over 180 Degrees apart

Positions
on Zone
Map

Each Position is listed in the Position Table

Position: 1-50

Rotation: 0-437

Distance: 5-35 feet

NOTE: The zone start up point (**Position 1**) must be 10+ feet so the head has enough flow/pressure to fully “pop up” and seat the riser seals.

After head is fully popped up, Positions may be set as short as 5 feet.

Position	Rotation	Feet
1	1	25
2	45	31.5

Feet 31.5 - Rotation 73 of 437

INSERT	—	+	ROTATE
--------	---	---	--------

Position 1
must be
10+ feet to
seat the
riser seals

Approximate
distance

**Current
Distance &
Rotation**

NOTE: Zone Maps are continuously saved by app

Go to a Position

(Two Methods)

Click/Hold **Rotate** until head
rotates to next Position
SAVE appears

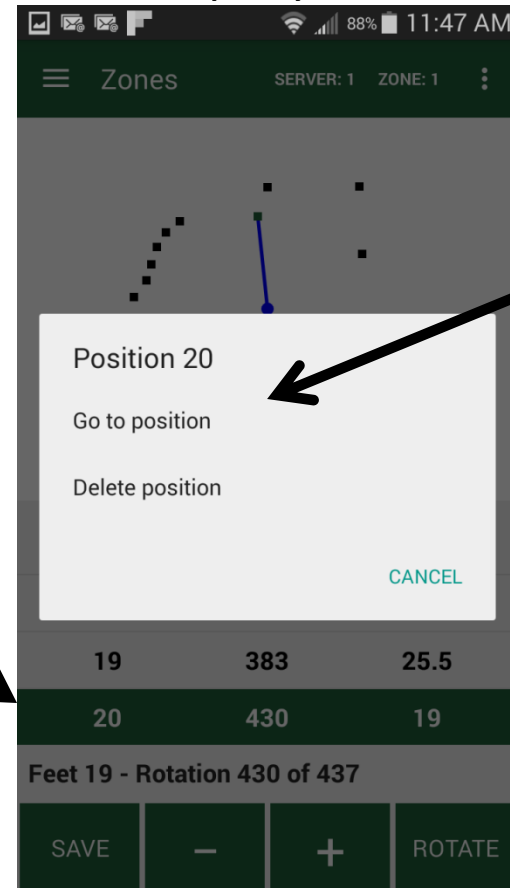

Position	Rotation	Feet	
18	373	26	
19	383	25.5	
20	430	19	
Feet 19 - Rotation 430 of 437			
SAVE	—	+	ROTATE

Fastest
Method

Scroll Position Table

Click/hold Position to highlight
Click: **Go to position**
Head will rapidly turn to Position

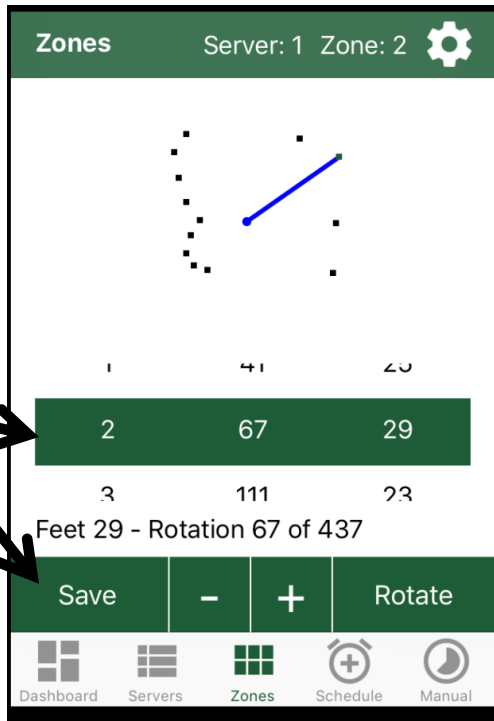

Position is
highlighted in the
Position Table
when reached

Edit Position Distances

Rotate to a Position
(**Save** appears)
Edit distance
Click **Save**

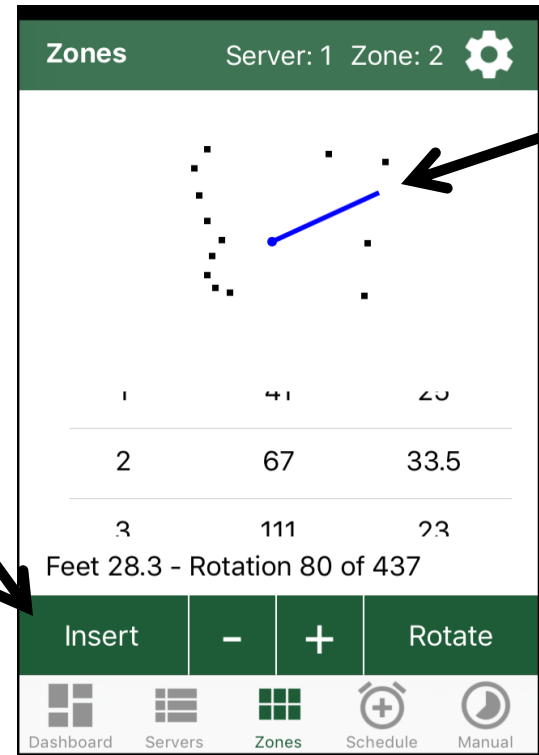

Saves
new
distance
for
existing
Position

Insert New Positions

Rotate to a new point between
two **Positions**
Set distance
Click **Insert**

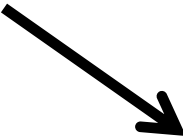

Creates
new
Position

Delete a Position

System will connect the remaining Positions

Click & hold
Position in table
to highlight

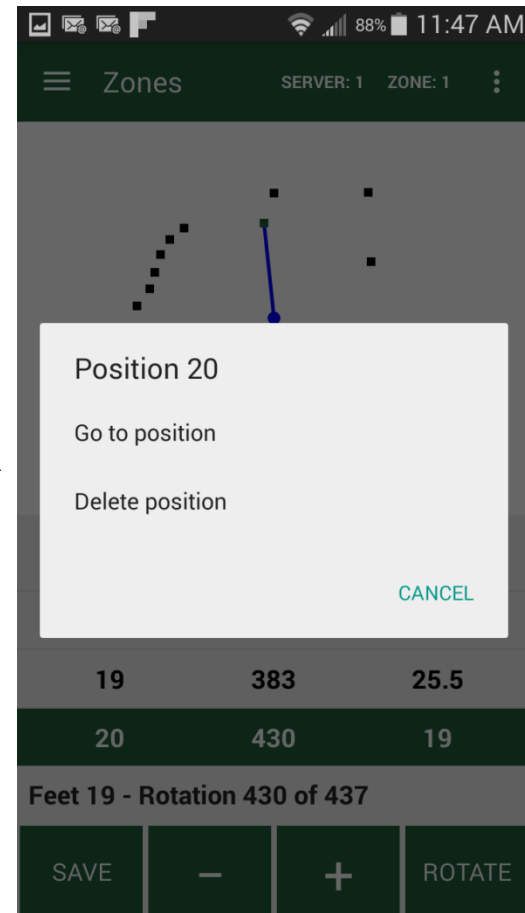

Position	Rotation	Feet
18	373	26
19	383	25.5
20	430	19

Feet 19 - Rotation 430 of 437

SAVE	—	+	ROTATE
------	---	---	--------

Delete position

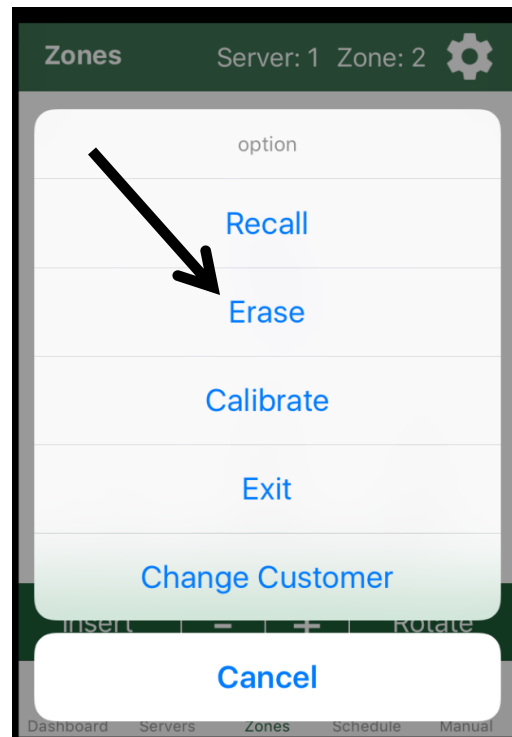

Erase Zone Map

Deletes all saved Positions
Zone calibration is not affected

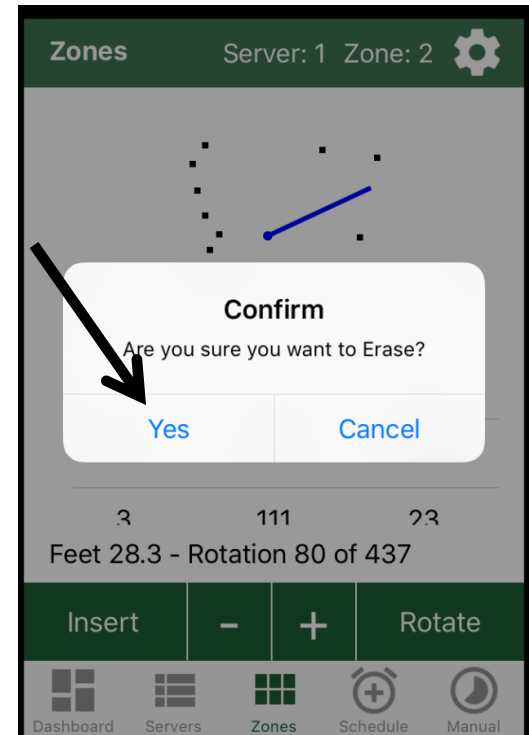

Click upper right Icon

Click Erase

Confirm: **Yes**

Change Zone

Click **Zone**

Position	Rotation	Feet	
18	373	26	
19	383	25.5	
20	430	19	
Feet 19 - Rotation 430 of 437			
SAVE	—	+	ROTATE

Select **Zone**
